ACCESS INNOVATION

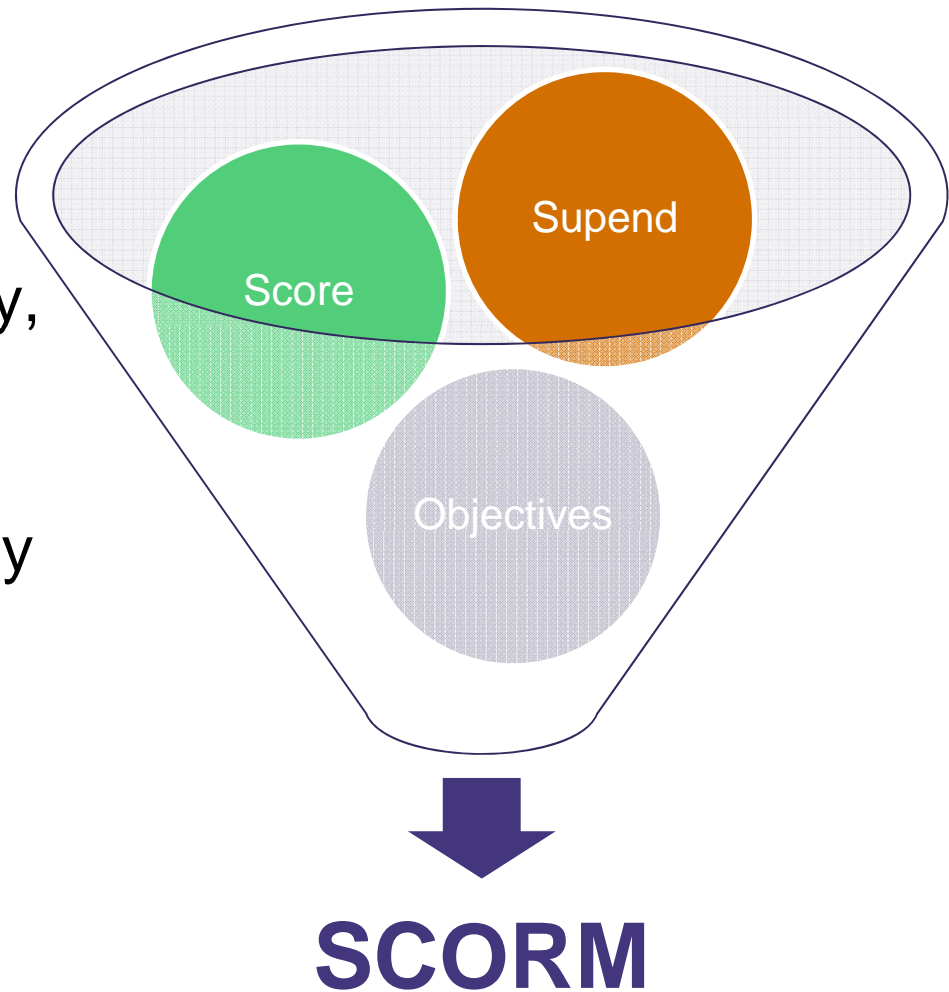

Accessibility

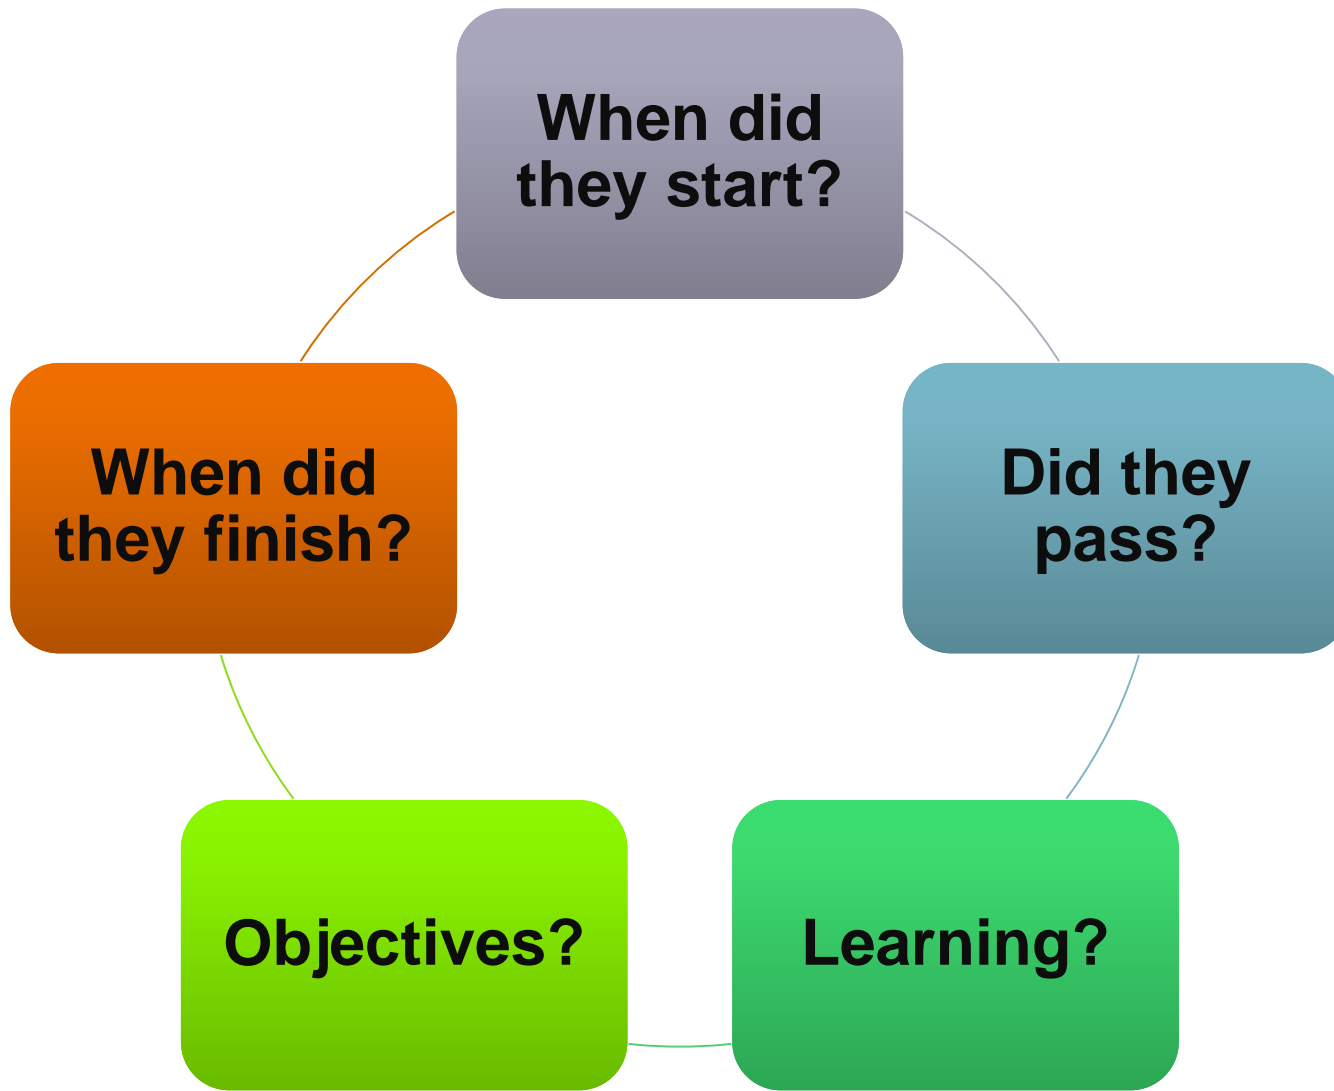

Interoperability

Durability

Reusability

- ▶ SCORM has great ideals, but a huge overhead
- ▶ It's supposed to play nicely, but doesn't always
- ▶ SCORM has a huge data model, most of which many people don't care about.

What do you do with cool or helpful resources you find online?

delicious

- ◀ We could do research online:
 - ▶ *Search social site,*
 - ▶ *Follow all our learners*
 - ▶ *Try to be their “friend”*
- ◀ Why don't we just **ask** them?
- ◀ And why don't we use what we already have to gather that data:
 - ▶ *An established API and toolbox that eLearning developers already know...*

SCORM

◀ Look at social sites

- ▶ *What do they ask?*

◀ Keep it simple

◀ Embed it into the resource or page

- ▶ *Make it easy*

◀ What we ask:

1. Did you find this tutorial helpful? Yes | No
2. Rating: 1 2 3 4 5
3. Would you recommend it to a coworker

- ▶ Find the elements that have value
- ▶ Find elements you can repurpose
- ▶ Keep it simple
- ▶ Look at your data requirements

score.scaled

Values -1.0 to 1.0
-1 = No
0 = Not Rated
1 = Yes

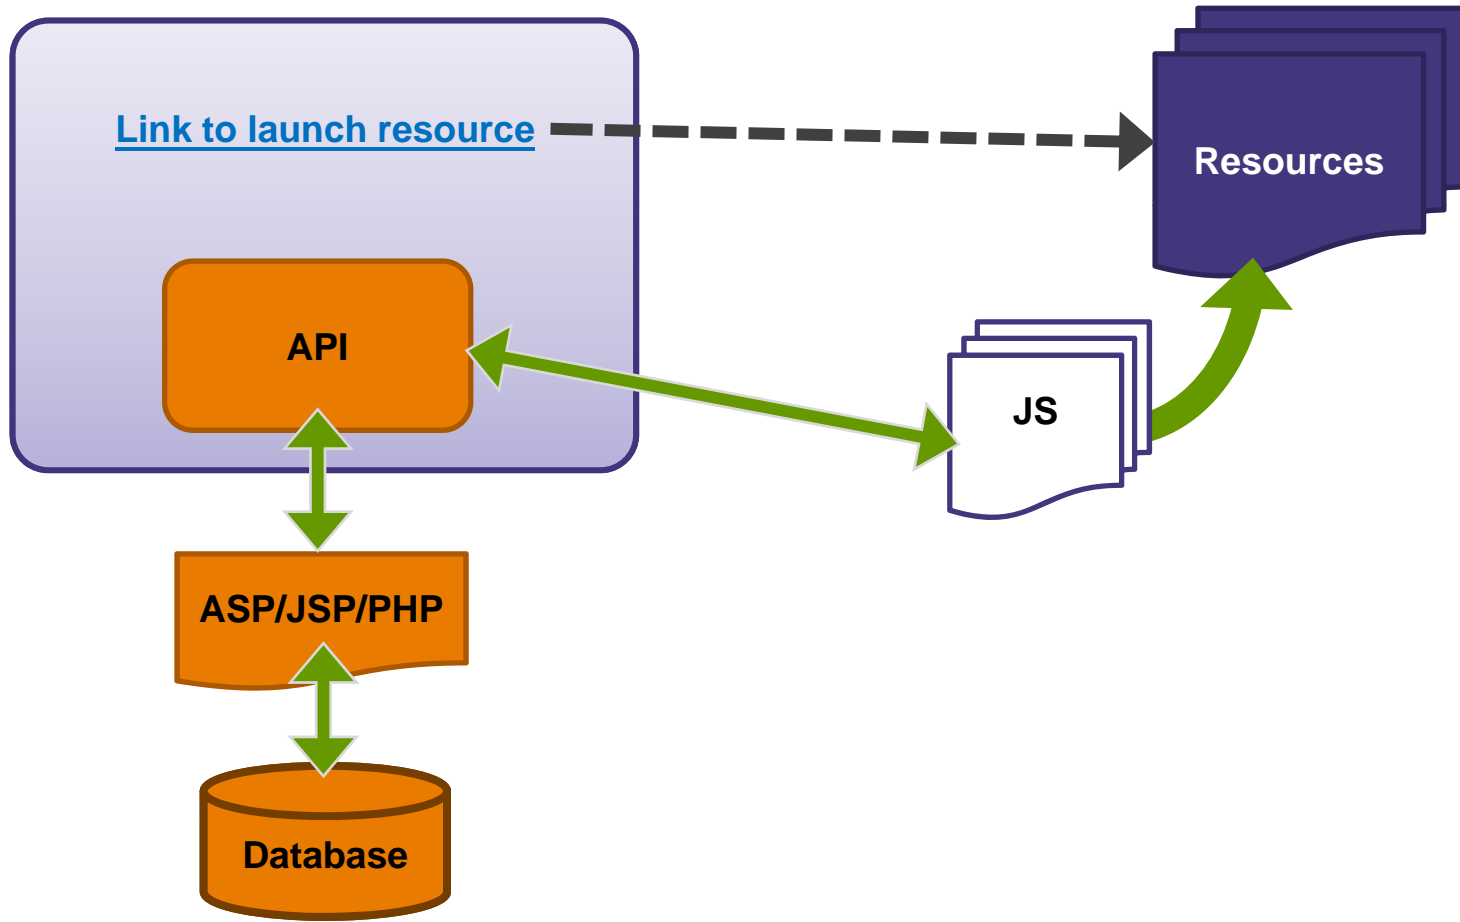

score.raw

Real numbers
Set rating on a
scale of 1 – 5

score.min

Real numbers
0 = Not rated
1 = Yes
2 = No

Looks a lot like SCORM...

- ▶ What do you care about?
- ▶ Do responses need to be individually unique?
- ▶ Can you get a name or ID?
- ▶ Recommendations:
 - ▶ *Keep it simple*
 - ▶ *Use what you have*
 - ▶ *Use JavaScript to get IP*

Create API Instance

JavaScript with methods to save and retrieve data

Create records

JavaScript to Launch

Open new window

Set resource ID

Load the API

- Normal SCORM Initialize

Set and Get Values

- Normal SCORM
- Some custom functions

Terminate

- Normal SCORM exit
- Make sure other resources can launch
